

QUANTUM IMPROVEMENTS CONSULTING

# Mixed Reality Aircrew Training Simulator Evaluation

Julian Abich IV, Ph.D.

Quantum Improvements Consulting

Orlando, FL

## Acknowledgments

The presenters acknowledge Vertex Solutions as the prime contractor and system developer. The views and conclusions contained in this document are those of the authors and should not be interpreted as representing the official policies, either expressed or implied, of U.S. Air Force (USAF), the U.S. Government, or Vertex Solutions, LLC.

Retrofitted

# Increase Qualified Training Throughput

USAF goal - 90 helicopter pilots annually

Helicopter-only training pipeline

Increase sim training

Reduce the types of simulators

# Multi-Place Mixed Reality (MPMR) Simulator

Co-Pilot

Pilot

Instrument Panel

Center Console

Flight Engineer

Seat

Overhead Console

Stick

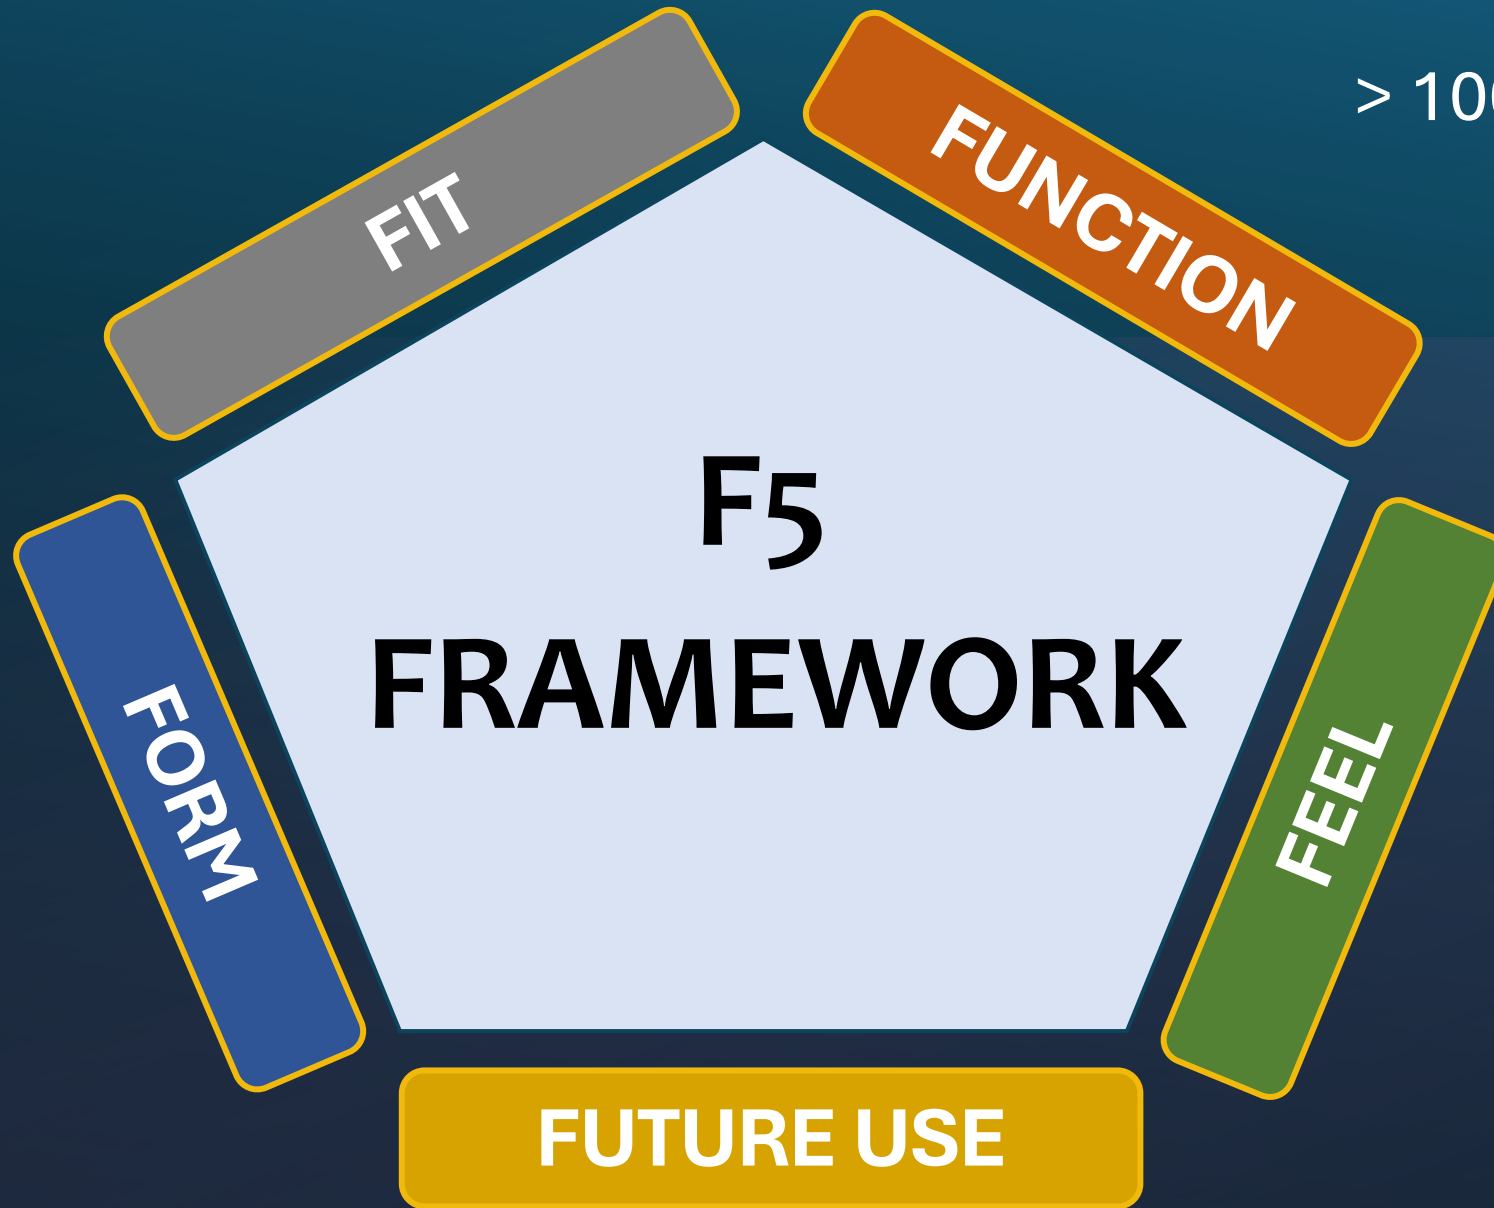

MR HMD

Cyclic

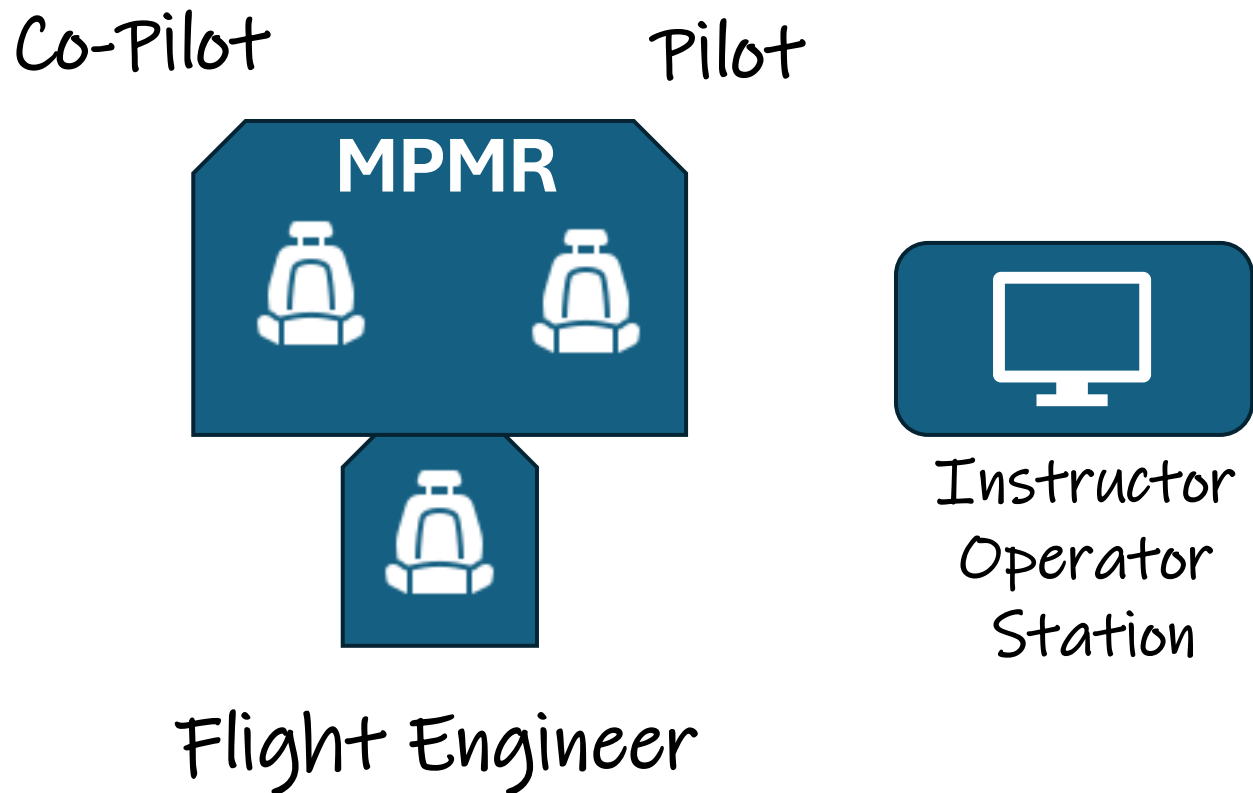

Pedals

> 100 critical aspects evaluated

# Methodology

## Flight Crew Measures

- Demographics
- Technology Self-Efficacy
- Simulator Sickness
- Helicopter Simulator Experience

## Instructor Measures

- Demographics
- Technology Acceptance
- Instructor Experience

## Training Tasks

- Aircraft operations
- Instrument procedures
- Navigation air failures
- Emergency procedure conditions

# Air Crew Training Participants

## Instructors

**Sample Size**

N = 16

**Flight Hours**

~ 2400 hours

**XR Training Experience**

~ 8 times

## Instructors in Training

N = 2

~1600 hours

~5 times

## Students

N = 2

~145 hours

~15 times

# Crew Resource Management - Training

- Communication Skills
- Situation Awareness
- Decision-Making
- Checklist and Procedures
- Emergency Procedures
- Teamwork & Conflict Resolution
- Stress Management
- Resource Management

I would choose to use the MPMR for CRM training

■ Strongly Agree ■ Agree ■ Undecided ■ Disagree ■ Strongly Disagree

# Crew Resource Management - Training

I was able to...

# Mixed Environment Integration

I would choose to use this **MR HMD** for rotary aircraft training

Strongly Agree Agree Undecided Disagree Strongly Disagree

# Mixed Environment Integration

## Feedback

- Difficult to see across full instrument panel
- Angle of view altered digital overlays
- Challenge transitioning from near to far focus

## Real Digital Kneeboard

## Recommendations

- Turn off foveated rendering
- Expand personal masking window
- Improve rendering to quickly read instruments and consoles

# Physical Controls and Interaction View

Physical  
Replica

Real  
Person

## Feedback

- Mismatch between pilot input to aircraft response
- Physical component locations

## Recommendations

- Adjust physical location of all controls relative to each other
- Ensure menu navigation and icons match real aircraft
- Calibration of pilot input to aircraft response

# Flight Engineer

## Pro

- Creates more opportunities for flight engineers CRM training

## Con

- Highest sim sickness ratings

## Recommendation

- Evaluate impact of location and role in sim
- Ensure MR masking allows full view of pilots

# Perceived Effectiveness

## Aircraft Operations

1. Before Starting Engine Checklist - 80%
2. Starting Engine Checklist – 70%
3. Hover/Taxi Checklist – 91%
4. Before Takeoff Checklist – 80%
5. Landing Checklist – 100%
6. Engine Shutdown Checklist – 57%

## Instrument Procedures

1. Instrument Cockpit Check – 51%
2. Instrument Takeoff – 71%
3. Instrument Enroute Procedures – 100%
4. Precision Approach Procedures – 77%
5. Non-precision Approach Procedures – 60%
6. Missed Approach – 75%

## Emergency Procedures

1. Engine Malfunction – Partial autorotation – 42%
2. Hung Start – 100%
3. Droop Compensator Failure – 50%
4. Engine Failure – 33%
5. Engine Overspeed – Nf Governor Malfunction – 80%
6. Engine Overspeed – Fuel Control Malfunction – 66%
7. Engine Underspeed – 100%
8. Engine Oil Pressure Low – 100%
9. Engine Fuel Pump Malfunction – 100%
10. Fuel Boost Pump Failure – 100%
11. Transmission Oil – Low Pressure - 100%
12. Rotor Brake Warning Light – 100%
13. Hydraulic Power Failure – 17%
14. Partial Power Loss – 50%
15. Loss of Tail Rotor Effectiveness - 66%
16. Fixed Pitch Failures – Hovering - 33%
17. Inlet Guide Vane Actuator Failure – 60%

**~70 – 100 % Agreement**

Implement user-centered design

Usability/User Experience evaluations are necessary

XR can facilitate full crew training

Avoid “The aircraft doesn’t fly like this” statements
